## **Unit 3 Review**

- 1. Answer the following questions using the graph provided.
  - a) What is the quantity on the x-axis?
  - b) What is the quantity on the y-axis?

c) State an approximate value for the correlation coefficient.

d) What does the point (30, 57) represent?

e) Identify an "outlier" point and write it as an ordered pair (x, y). What does this point represent?

f) Write a statement to summarize any conclusions you can make from this data.

2. Find the mean, median and mode of the following data sets: a) 5, 3, 2, 6, 5, 2, 5

|    | Mean =                      | Median =                         | Mode =                      | Range =      |
|----|-----------------------------|----------------------------------|-----------------------------|--------------|
|    | b) 14, 9, 20, 5, 17, 13     |                                  |                             |              |
|    | Mean =                      | Median =                         | Mode =                      | Range =      |
| 3. | For the box plot below, fin | d the median (Q2), $Q_1$ , $Q_3$ | IQR (interquartile range),r | nin. and max |

3. AX. -,

| Q1:  | Q2:  | Q3:  |
|------|------|------|
| IQR: | Min: | Max: |

4. Draw a box plot for the following data. 40, 80, 90, 90, 100, 120, 130

5. The box plot below shows how much time was spent per night on homework for a certain class in high school in September.

## Average Minutes Per Night Spent On Homework

- a) What percent of students spent more than 60 minutes on homework per night?
- b) What is the range of times that the middle 50% of students spend on homework per night?
- c) How many students do not do homework?
- d) What percent of students spend less than 20 minutes per night on homework?
- 6. The table below shows the results of an experiment for dahlia's grown in compost beds.

| Weeks | Median Height in<br>Compost bed (in.) |
|-------|---------------------------------------|
| 1     | 10.00                                 |
| 2     | 13.50                                 |
| 3     | 17.75                                 |
| 4     | 51.50                                 |
| 5     | 30.50                                 |
| 6     | 40.50                                 |
| 7     | 65.00                                 |
| 8     | 80.50                                 |
| 9     | 91.50                                 |

- a) What is the independent variable:
- b) What is the dependent variable:
- c) Graph the scatter plot.
- d) State any outlier point(s).
- e) Draw a curve-of-best-fit (removing any outliers).
- f) Is there a trend in the data? If yes, then describe the trend (strong/weak, positive/negative, linear/non-linear).
- g) Estimate the median height of the compost bed after 10 weeks. Show your work on the graph. Did you interpolate or extrapolate?
- h) Estimate the number of weeks it would take for the median height to be 21 inches. Show your work on the graph. Did you interpolate or extrapolate?

7. There are 900 students in a school at the start of the year. The number of students increases by 2.3% per month.

| Time (months) | # of Students |  |
|---------------|---------------|--|
|               |               |  |
|               |               |  |
|               |               |  |
|               |               |  |
|               |               |  |
|               |               |  |
|               |               |  |
|               |               |  |

a) Complete the table to show the number of students at the end of each month for 10 months.

b) Is this an example of appreciation or depreciation? (circle one)

c) Write an equation to model the student population, P, after t months.

d) Use your equation to determine the number of students in the school after 12 months.

8. \$3200 is invested for 5 years at 3.5% simple interest annually.a) Is this relationship linear or nonlinear?

b) Write an equation to represent the total amount in the account A, after n years.

c) How much is the investment worth at the end of 5 years?

- d) How much interest was earned on the investment?
- 9. Due to the current economic environment, your \$40,000 investment is depreciating at a rate of 15% annually.

a) Is this relationship linear or nonlinear?

b) Write an equation to represent the total amount in the account A, after n years.

- c) How much will your investment be worth at the end of 3 years?
- d) How much money have you lost in 3 years?

- 10. Hana starts with \$40 in her bank account and deposits \$20 each week. Jaydan starts with \$100 in his bank account and deposits \$10 each week.
  - a) Define your variables.

Hana:

|        | ) Write two equations to represent the total amount in the bank account at the end of eac<br>a: Jaydan: |        |  |          |
|--------|---|--------|--|----------|
| ,      | your equation to fill out a table of graph the two relations.   | values |  |          |
|        | Jaydan:   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
|        |   |        |  |          |
| d) Wha | at is the solution to the system? WI  | hat +  |  | <u> </u> |

- does it represent?
- e) If they both were saving up to buy a new Nintendo Switch that costs \$400, who would have enough money to purchase it first?
- 11. Your school is donating items to the local food pantry. Your homeroom is having a competition to see who will donate the most items. You have already donated 14 items and plan to donate 3 more each week. Your friend has already collected 8 items and plans to collect 5 more items each week. How many weeks will it take for both of you to have collected the same amount? How much will each of you have collected at that time?

a) Define your variables.

b) Write an equation to represent the total number of items collected.

You: \_\_\_\_\_ Your Friend: \_\_\_\_\_

c) Use your equation to algebraically solve for when you both have collected the same amount of items.
