

5.7 Perimeter and Area of Composite Figures

Ex. 1 Determine the perimeter.

A Composite Figure is "composed", or made up of more than one shape.

$$P = 17.1 + 6.3 + 5.4 + 7.2 + 5.1 + 7.2 + 6.6 + 6.3 = 61.2 \text{ cm}$$

$$P = 6.4 + 5.5 + 13 + 5.5 = 30.4 \text{ cm}$$

$$x = \frac{13 - 6.4}{2} = 3.3$$

$$y^2 = 4.4^2 + 3.3^2 = 10.89 + 19.36 = 30.25$$

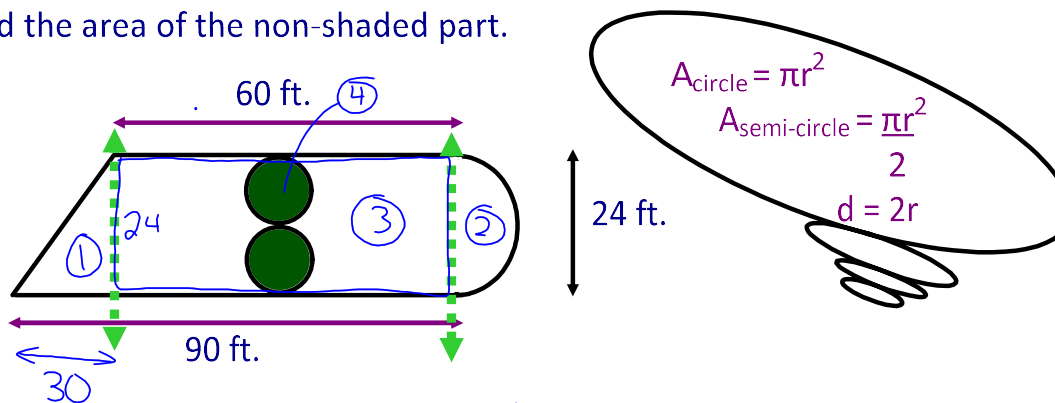

$$y = \sqrt{30.25} = 5.5$$

TIP of the day:

Use a highlighter to outline the perimeter so that you don't add inside pieces!

Ex. 2 Find the area of the non-shaded part.

① $A = \frac{30(24)}{2}$
 $= 360 \text{ ft}^2$

③ $A = l \times w$
 $= (60)(24)$
 $= 1440 \text{ ft}^2$

② $A = \frac{\pi r^2}{2}$ $d = 24$
 $\therefore r = 12$
 $= \frac{\pi (12)^2}{2}$
 $= 226.1 \text{ ft}^2$

④ 2 circles, radius 6
 $A = \pi r^2$
 $= \pi (6)^2$
 $= 113.1 \text{ ft}^2 \leftarrow \text{each}$

All
 $A = \textcircled{1} + \textcircled{2} + \textcircled{3} - \textcircled{4} - \textcircled{4}$
 $= 360 + 226.1 + 1440 - 113.1 - 113.1$
 $= 1800 \text{ ft}^2$

Ex. 3 Find the perimeter.

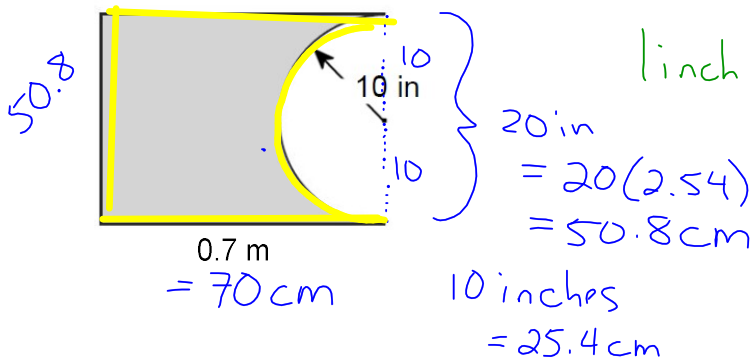

$P = 20 + 19.76 + 25.1 + 35$
 $= 99.86 \text{ cm}$

$x^2 = 15.24^2 + 20^2$
 $x^2 = 232.26 + 400$
 $x^2 = 632.26$
 $x = \sqrt{632.26}$
 $= 25.1 \text{ cm}$

Ex. 4 Find the perimeter of the shaded region.

Perimeter of a circle is called circumference.

$$P = 50.8 + 70 + 70 + 79.8 = 270.6 \text{ cm}$$

Whole Circle
 $C = 2\pi r$

Half Circle
 $C = \frac{1}{2} 2\pi r = \pi r$

Actual Circumference
 $C = \pi(25.4) = 79.8 \text{ cm}$

Ex. 5 Find the area of the shaded region.

$$2'' = 2 \times 2.54 = 5.08 \text{ cm}$$

$$3'' = 3 \times 2.54 = 7.62 \text{ cm}$$

$$A = A_{\text{RECT}} - A_{\text{TRI}} = 38.71 - 6 = 32.71 \text{ cm}^2$$

$$A_{\text{RECT}} = l \times w = 5.08 \times 7.62 = 38.71 \text{ cm}^2$$

$$A_{\text{TRI}} = \frac{b \cdot h}{2} = \frac{3 \cdot 4}{2} = 6 \text{ cm}^2$$

Did you notice?

Perimeter is linear... degree 1 (cm, m, mL, etc.)
 Area is quadratic... degree 2 (cm², etc.)
